Almetax Easy® is a food supplement composed of alpha-lipoic acid, L-tryptophan, curcuma, vitamin B5 (pantothenic acid), vitamin B6, chromium picolinate, zinc and vitamin C.

- » Vitamin B5 promotes tiredness and fatigue decrease.
- » Chromium contributes to maintain the normal levels of blood glucose.
- » Zinc helps to maintain the normal levels of blood testosterone.
- » Vitamin B6 contributes to the hormonal activity regulation.
- » In pre-menstrual phase, the curcuma is perfect to combat the menstrual cycle disorders.
- » Vitamin C contributes to the cells protection against the oxidative stress.

COMPOSITION

One Almetax Easy® oral sachet includes:

CurQfen® (curcuma Longa and Trigonella foenumgraecum dry extract) that belongs to total curcuminoids (35%, 140 mg), L-Tryptophan (150 mg), alpha-lipoic acid (313 mg), zinc (3 mg), chromium (50 µg), vitamin C (125 mg), vitamin B5 (pantothenic acid – 9 mg), vitamin B6 (2,375 mg).

COMPONENTS

» CURCUMA

The CurQfen® curcuma BCM-95® extract (curcuma longa L.) rootstock dry extract standardized at 35% in curcuminoids and fenugreek (Trigonella foenum-graecum L.) seed dry extract. This particular combination increases the absorption after the oral administration, optimizing also the low-dose effects. The curcuma acts with a cellular protective effect, thanks to its antioxidant action and it helps to combat the disorders linked to the menstrual cycle, also in premenopausal phase. CurQfen® is a Akay Flavours & Aromatics Pvt. Ltd. Malaïdamthuru P. O., Aluva, Cochin 683561, Kerala, India registers trade mark.

» L-TRYPTOPHAN

It is an essential amino acid because the organism can't synthesize it. It depends by the diet contribution. The L-Tryptophan is the serotonin synthesis precursor (also called "happiness hormone") that is a neurotransmitter that regulates the mood balance. It is also a melatonin synthesis precursor that has positive effects on quality sleep.

» ALPHA-LIPOIC ACID

The alpha-lipoic acid is inside our organism. It has the ability to act in water-soluble and fat environments. This important element enables the alpha-lipoic acid access to all the human body cells. It is an antioxidant element with a strong role in cells energy metabolism. It is a cofactor for different enzymes that take part to the glucose conversion and different sources of energy.

» BISGLYCINATE CHELATE ZINC

The bisglycinate chelate zinc has a specific role in many hormones functioning, such as sexual hormones. It contributes to the normal glucose metabolism and it potentiates the immune system function.

The chelation applied to the zinc favors its absorption.

» CHROMIUM PICOLINATE

The chromium picolinate is considered as best source of chromium. It is important to maintain the blood glucose normal levels.

» VITAMIN C

It supports the zinc immunomodulatory action and performs a strong antioxidant action that contributes to our immune system welfare and protects the cells by the oxidative stress. The vitamin C decreases the tiredness and the fatigue, by favoring the organism support for the nervous system and psychological function proper functioning.

» VITAMINS GROUP B: B5 AND B6

The vitamin B5 (pantothenic acid) is the coenzyme A precursor, that has an important role in carbohydrates, fats and proteins synthesis; it supports the food energy utilization and it contributes to tiredness and fatigue reduction. The vitamin B6 contributes to the nervous and immune systems proper functioning. This vitamin has a very important role in hormonal activity, especially for women. It plays a salutary physiological effect, because it helps the normal psychological function.
